

Caudal Fin Clip

Zebrafish will regenerate caudal fin tissue that is removed. Caution must be used to only remove the fin tissue, and not damage the peduncle or bleeding and permanent tissue damage may occur.

- Anesthetize the fish in MS-222.
- With a sterile scalpel or scissors, cut up to 1/2 to 2/3 of the caudal fin.
- Use caution not to cut into the peduncle tissue.
- Recover the fish in fresh system water.
